

# ESXI

- [scp](#)

# scp

Enable SSH client (CLI method).

Check if SSH client service is enabled. Will return 'False' if 'Disabled'.

```
esxcli network firewall ruleset list --ruleset-id sshClient
```

Then enable SSH client.

```
esxcli network firewall ruleset set --ruleset-id sshClient --enabled=true
```

```
scp -rp sourcedirectory user@dest:/path
```
