

Reset - Last

However, just in case it happens, don't worry, there's a remedy. Type the following command:

```
$ git reflog
```

In fact git maintains uncommitted changes on a parallel Directed Acyclic Graph (DAG) for internal bookkeeping. The previous command should show the Head states previous to running git reset -hard. Just pick the most recent Head that matches your changes that you want to recover. Afterwards, reset the current Head to that previous Head using:

```
$ git reset -hard Head@{4}
```
