

docker-compose (1)

version: "3"

#WebUI ohne Password: in Containerconsole diesen Befehl eingeben: pihole -a -p

More info at <https://github.com/pi-hole/docker-pi-hole/> and <https://docs.pi-hole.net/>

services:

pihole:

container_name: pihole

image: pihole/pihole:latest

For DHCP it is recommended to remove these ports and instead add: network_mode: "host"

network_mode: host

ports:

- "53:53/tcp"

- "53:53/udp"

- "67:67/udp" # Only required if you are using Pi-hole as your DHCP server

- "80:80/tcp"

environment:

TZ: 'Europe/Berlin'

#TZ: 'America/Chicago'

WEBPASSWORD: 'set a secure password here or it will be random'

Volumes store your data between container upgrades

volumes:

- './etc-pihole:/etc/pihole'

- './etc-dnsmasq.d:/etc/dnsmasq.d'

<https://github.com/pi-hole/docker-pi-hole#note-on-capabilities>

cap_add:

- NET_ADMIN # Required if you are using Pi-hole as your DHCP server, else not needed

restart: unless-stopped
