

enable IPv6 (Docker)

/etc/docker/daemon.json

```
{ "ipv6": true, "fixed-cidr-v6": "2001:db8:1::100/64", }
```

Console:

```
$ ip -6 route add 2001:db8:1::/64 dev docker0
```

```
$ sysctl net.ipv6.conf.default.forwarding=1
```

```
sysctl net.ipv6.conf.all.forwarding=1
```

```
service docker stop
```

```
service docker start
```

```
docker network create --driver bridge --ipv6 --subnet=2a01:4f8:a:b:c::/80 ipv6
```

```
docker run --rm -t --network ipv6 --ip6 '2a01:4f8:a:b:c::5' busybox ping6 -c 4 google.com
```

hmm, mal testen: <https://github.com/robbertkl/docker-ipv6nat#docker-container>
